Guru Gobind Singh Indraprastha University, Delhi
April ,2024**

STUDENT UNDERTAKING

This is to certify that I have completed a project report on the topic “**Comparative Analysis On Consumer Satisfaction Of Hotel Booking Sites In Delhi**” for the requirement for the award of degree of Bachelor of Business administration at Vivekananda Institute of Professional Studies, Vivekananda School of Business Studies, New Delhi. This is an original piece of work and has not been submitted elsewhere.

ADITYA KUMAR SINGH

CERTIFICATE FROM FACULTY GUIDE

This is to certify that the project titled “**Comparative Analysis On Consumer Satisfaction In Hotel Booking Sites In Delhi**” is an academic work done by **Aditya Kumar Singh** submitted in the partial fulfilment of the requirement for the award of the degree of Bachelor of Business administration from Vivekananda Institute of Professional Studies, Vivekananda School of Business Studies, New Delhi., under my guidance & direction. To the best of my knowledge and belief the data & information presented by him in the project has not been submitted earlier.

DR. SHIKHA SHARMA

ACKNOWLEDGEMENT

It is a matter of great satisfaction and pleasure to present this project report on “comparative analysis on consumer satisfaction of hotel booking sites in India”. I take this opportunity to thank all my faculty for their encouragement and able guidance at every stage of the project. I am grateful to **Dr. Shikha Sharma**, my project guide for sparing her precious time and guiding me and for giving valuable suggestions for compiling the project report. I express my heartfelt gratitude to all those people who have helped me directly or indirectly in completion of my research.

EXECUTIVE SUMMARY

This study focuses on Consumer satisfaction of hotel booking sites. This study provides a step towards analysing the interrelationship between the textual comment and the itemized rating in consumers' online feedback, and to study differentiations among diversified segments of consumers who leave the feedback for hotel booking experience. The data are primarily being collected from basic level. Based on the coded comments and itemized ratings from the dataset, our study shows that different customer segments demonstrate varied interrelationship behavioural patterns, and factors like satisfaction and contextual backgrounds will matter.

The findings from this research may help hotels to develop varied marketing strategies for different segment of customers, and help online reputation sites to improve their services by distinguishing dissimilar behavioural patterns in different customer segments. The research has been done using descriptive research method as the variables were required to be reserved for careful deliberation and the data collection has been of qualitative in nature with primary data only.

INTRODUCTION

1.1 INTRODUCTION OF THE STUDY

This research will look at the relationship between the three online hotel booking website that is Make my trip, Oyo and booking.com with online feedback, as well as the differences between different segments of customers who offer feedback. The information was gathered from different types of consumers those who have used Hotel Booking services and online hotel reputation feedback form.

Our research demonstrates that different consumer segments have Different relational behaviour patterns and characteristics like satisfaction and contextual backdrops will matter, based on the coded Remarks and itemise devaluation from the data set. This could aid Hotels in developing different marketing tactics for different segments of clients, as well as online reputation sites in improving their services by discriminating between different types of customers.

User generated content (UGC) has exploded in recent years, thanks to the fast expansion of the Internet and the popularity of social media. Consumers creates this in the form of written comments on different online feedback channels, mostly websites, in order to share their prior consuming experience with others. This type of User generated content (UGC) successfully assists other customers in making better decision and choices.

Aside from textual comments, most e-commerce website allow customers to score a review of hotel services based on a few specific criteria. The quantifiable data from the online rating (which generally, includes an overall rating and many detailed ratings) aids other in making decisions. As an online feedback system with both textual and graphical components promote online booking in e-markets, most hotels can adjust their business processes quickly because to advances in information technology. Many hotels are now recognising the need of incorporating information technology (hence, IT) into their entire business operations. Third party online hotel booking sites are best example of combining IT and Commercial operations in the broader hotel Prior to the introduction of third-party services, customers had to call a hotel reservation department directly.

However, the introduction of third-party booking services (such as Hotels.com, Booking.com, Oyo and Make my trip) has provided consumers with a no of advantages before making a reservation. Third party online booking services has evolved into a range of mobile platforms, including smart phones, as they have gotten more sophisticated.

In this field of research, some studies have found that the main reason people were hesitant to buy online was a lack of trust in online channels. The importance of consumer trust in third-party internet booking services. Individuals, for example use of the third-party apps when consumer believe that they are more reliable.

Consumers may believe that third party booking sites have outstanding Reputation for providing trustworthy services and honestly if they guarantee their own competence, integrity and reliability towards them. As we consider trust in third-party online booking services to be one of the most important elements influencing people's decision to book. We are going to do comparative analysis on consumer satisfaction of 3 big sites or app that provide hotel booking facility.

1.2 Company profile

1.MAKE MY TRIP-

MakeMyTrip.com, India's leading online travel company was founded in the year 2000 by Deep Kalra. Created to empower the Indian traveller with instant booking and comprehensive choices, the company began its journey in the US-India travel market. It aimed to offer a range of best-value products and services along with cutting-edge technology and dedicated round-the-clock. The company provides online travel

services including airline tickets, domestic and international holiday packages, hotel reservations, rail, and bus tickets. As of 31 March 2018, they have 14 company-owned travel stores in 14 cities, over 30 franchisee-owned travel stores in 28 cities, and counters in four major airports in India. MakeMyTrip has also numerous international offices in New York, Singapore, Kuala Lumpur, Phuket, Bangkok, and Dubai.

Make My Trip route planner provides all the basic required information on more than 10 lakh (1 million) routes in India.

History of Make my trip-

It was launched in US market in the year 2000 to cater to the overseas Indian community for their US to India travel needs. MakeMyTrip started Indian operations in September 2005, offering online flight tickets to Indian travellers. The company also started to focus on non-air businesses like holiday packages and Hotel bookings services. On 17 August 2010, MakeMyTrip Limited was listed on the NASDAQ after its initial public offerings. The company created several travel related apps for mobile devices. MakeMyTrip also made three acquisitions—Luxury Tours and Travel Private Limited (Singapore), ITC Group Hotel Travel Group, and ETB Group—to enter new markets in Southeast Asia and Europe. In September 2014, MakeMyTrip instituted a \$15 million innovation fund to support travel start-ups.

In July 2015, MakeMyTrip invested in the travel information and hotel review portal Holiday and picked up approximately 30% stake in the company. In the same month, it invested \$5 million in Bona Vita Technologies, a start-up which plans to utilise the funds to build innovative products in the travel industry.

Vision and mission of make my trip-

MakeMyTrip's mission is to "**provide customers a one-stop-shop for all their travel needs.**" It helps the users get optimum user experience across the entire travel journey, which includes "effective planning resources, superior booking experience across all channels, and in-journey 24x7 live customer support."

MakeMyTrip Revenue-

MakeMyTrip revenue soared from \$163.4 million in FY21 to become \$303.9 million in FY22. The pandemic receded giving way to a much-needed recovery of the travel and tourism sector and the players operating in the same. The revenue MakeMyTrip earned from the air-ticketing business grew by 55.6% to be \$88.7 million in FY22, whereas the revenue from hotel and packages grew by 131.4% to be \$157.3 million.

2. BOOKING.COM-

2.1 Booking.com is a Dutch online travel agency for lodging reservations & other travel products, and a subsidiary of Booking Holdings. It is headquartered in Amsterdam. The website has over 28 million listings. The site is available in 43 languages.

2.2 History of Booking.com-

Founded in 1996 by Geert-Jan Bruinsma. He was a student at Universiteit Twente, where he worked from an office in Enschede on his website Bookings.nl. Booking.com was formed when Bookings.nl, merged in 2000 with Bookings Online, founded by Sicco and Alec Behrens, Marijn Muijs and Bas Lemmens, which operated as Bookings.org. The name and URL were changed to Booking.com and Stef Noorden was appointed as its CEO. The ad was rejected since De Telegraaf only accepted ads with a phone number, not with a website. In 2002, Expedia refused to buy bookings.nl.

In July 2005, the company was acquired by Priceline Group (now called Booking Holdings) for \$133 million, and later it cooperated with ActiveHotels.com, a European online hotel reservation company, purchased by Priceline Group 9 months earlier for \$161 million in Sept 2004.

In 2006, Active Hotels Limited officially changed its name to Booking.com Limited. The integrations of Booking.com and Active Hotels successfully helped the parent improve its financial position from a loss of \$19 million in 2002 to \$1.1 billion in profit in 2011. This acquisition was praised by some social media as “the best

acquisition in Internet history” since no other acquisition in the digital travel market had been shown to be as profitable.

Darren Huston was appointed as Chief Executive Officer of Booking.com in September 2011 by its parent company, and also served as President and Chief Executive Officer of Booking Holdings since 1 January 2014 until his resignation on 28 April 2016 after an at-work relationship was revealed. [reference from Wikipedia] .

2.3 Booking.com revenue-

According to Booking.com's latest financial reports the company's current revenue (TTM) is \$12.51 B. In 2021 the company made a revenue of \$10.95 B an increase over the years 2020 revenue that were of \$6.79 B. The revenue is the total amount of income that a company generates by the sale of goods or services. Unlike with the earnings no expenses are subtracted.

3.OYO

OYO Rooms (stylised as **OYO**), also known as **OYO Hotels & Homes**, is an Indian multinational hospitality chain of leased and franchised hotels, homes, and living spaces. Founded in 2012 by , OYO initially consisted mainly of budget hotels.^[1] As of January 2020, it has more than 43,000 properties and 1 million rooms across 800 cities in 80 countries.

The company's current and former investors include SoftBank Group, Didi Chuxing, Greenoaks Capital, Sequoia India, Lightspeed India, Hero Enterprise, Airbnb, and China Lodging Group.

History

In 2012, Ritesh Agarwal launched Oravel Stays as a budget accommodation listing and booking website, later renamed to OYO in 2013. Shortly after launching Oravel Stays, Ritesh Agarwal received a grant of \$100,000 as part of the Thiel Fellowship, a two-year program from PayPal co-founder Peter Thiel.

In 2019, OYO had over 17,000 employees globally, of which approximately 8000 are in India and South Asia. OYO Hotels & Homes was a full-fledged hotel chain that leases and franchises assets. The company invests in capex, hires general managers to oversee operations and customer experience, and generates around a million job opportunities in India and South Asia alone. OYO set up 26 training institutes for hospitality enthusiasts across India in 2019.

In April 2019, the company announced the launch of OPEN programme, an initiative for its partner hotels to help them reach their business goals. It further Introduced an upgraded Co-OYO app for hotel partners to provide complete visibility on all business & customer metrics.

In June 2021, Oyo Rooms collaborated with Yatra, Airbnb, and EaseMyTrip to form the Confederation of Hospitality, Technology and Tourism Industry (CHATT), an industry body for the tourism sector of India.

In October 2021, OYO appointed paralympian Deepa Malik as an independent director on the company's board of directors. In December 2021, OYO onboarded former State Bank of India (SBI) Chairman Rajnish Kumar as its strategic group advisor.

Funding

In September 2018, OYO raised \$1 billion, of which the RoC filing for the amount of \$100 million raised from Star Virtue Investment Ltd. was made on 13 February 2019.

In February 2019, OYO received \$100 million funding from the Chinese vehicle-for-hire company, Didi Chuxing.

In July 2019, Ritesh Agarwal, through RA Hospitality Holdings in Cayman Islands, signed a \$2 billion deal to buy back shares from existing investors, Lightspeed Venture Partners and Sequoia India, to increase his stake in the company to 30%. The company was valued at \$10 billion with this deal.

In October 2019, OYO raised Series F funding of \$1.5 billion led by SoftBank Group, Lightspeed Venture Partners and Sequoia India.

In July 2021, OYO closed a debt financing round of \$660 million from global institutional investors to service existing loans.

In July 2021, Microsoft expressed interest to invest in OYO before its IPO and a multi-year strategic deal was signed in September 2021.

In October 2021, Oyo filed its draft red herring prospectus with the Securities and Exchange Board of India (SEBI) to raise US\$1.2 billion through an initial public offering.

In January 2022, more than 500 current and former employees of OYO, purchased around 3 crore shares in the company. The total value of these shares can be approximated to about ₹330 crore (US\$41 million), as per the last valuation of OYO of \$9.6 billion.

1.3 INDUSTRY PROFILE-

Online Hotel booking industry

Online Hotel Booking is also called hotel online hotel reservations. It is the popular technique for booking hotel apartment. It is process of reserve accommodation on online sites through mobile or desktop. There are two methods used for hotel booking such as book rooms on a computer as well as book room using several online travel agents to compare prices and facilities at different hotels. There are various services included in online hotel booking service such as hotel accommodation, travel

accommodation, vacation packages and others. Rising Use of social media sites will help to boost global online hotel booking market.

This growth is primarily driven by Increase Customers' Faith in Online Payment and Emerging Internet Penetrations.

Globally, a noticeable market trend is evident Growing Dependency due to Business Meetings. The Hotels, Resorts & Cruise Lines sector in the North America region has been increasing at a sustainable rate and further growth is expected to be witnessed over the forecast period, owing to the robust investments and expansion in production facilities in the region. Major Vendors, such as Airbnb, Inc. (United States), Booking.com Ltd (United Kingdom), Choice Hotels AS (United States), Agoda Company Pte. Ltd. (Singapore), Ctrip.com International, Ltd. (China), Expedia Group, Inc., ibibo Group Private Ltd. (India) and InterContinental Hotels Group PLC (United Kingdom) etc have either set up their manufacturing facilities or are planning to start new provision in the dominated region in the upcoming years.

Key Developments in the Market:

On 13th August 2018, Booking Holdings has acquired Australia-based metasearch company Hotels Combined. The deal was established for 140 million dollars.

Market Drivers

Increase Customers' Faith in Online Payment

Emerging Internet Penetrations

Market Trend

Growing Dependency due to Business Meetings

Attractive Marketing and Promotional Strategies

Restraints

Rising Incidences of failed Transactions

Need of Proper Internet Access

Increasing Concern about Data Security

Opportunities

Increasing Disposable Income and Technical Advancement in Online Booking Mobile Apps

Challenges

Trustworthiness on Online Hotel Booking

1.3 Objectives of the Research –

- To study the consumer behaviour pattern towards booking a hotel online on Make my trip, Oyo and Booking.com
- To study the Comparative data analysis between the three-hotel booking site and marketing and operational strategies to attract customers will help to know which on is the best for customers.

LITERATURE

REVIEW

NASSCOM, PwC report of 2018 discussed that India has the second largest Internet base, with the internet penetration bound to increase to 60% by 2022, thereby implying that the comfort of users in online transactions would increase manifold. Of the 500 million users presently , approximately 70 million people are estimated to have more than three to four years of online experience, which makes them comfortable with engaging in e-commerce. The e-commerce industry is expected to grow into a 100 billion USD market by 2022 and Online travel is expected to be a major chunk of it

The entire process of exploring, ordering, and receiving is referred to as the online user experience. Because of the peculiarities of the service offering, the study of online user experience is particularly important for online hotel booking. Therefore, the likelihood of achieving satisfactory result and how consumers interact and manage hotel booking websites online are extremely dependent

The hotel's rating is a motivating factor in booking intentions, for it helps customers minimize the risk associated with the intangible products or services offered by a hotel (Ullah et al., 2019b; Lin et al., 2019). Hotels with a good rating are less likely to Frontiers in Environmental Science 03 frontiersin.org Ding et al. 10.3389/fenvs.2022.978070 reduce the comfort of their customers (Calero-Sanz et al., 2022; Orea-Giner et al., 2022). While a rating is not a universal guarantee of the quality of a hotel, it provides sufficient information to enable customers to form preferences about hotel bookings (Callan and Lefebvre, 1997). The hotel receives a high rating due to the different tangible and non-tangible factors, and the rating methods of hotels may vary. However a higher rating promises provision of good services by the hotel, as well as the attainment of a high level of customer satisfaction. In the matter of bookings, most of the previous studies focus on various factors, such as rental rate, location, hotel rating, perceived value, and brand reputation, with less attention given to environmental factors. Therefore this study contributes to the literature by exploring the implications of the environment for customer satisfaction

More research is being done on the significance of both on hotel booking websites and in the hospitality industry (Marzuki et al., 2018; Rodzi et al., 2018. Prior research has

shown that characteristics both positively affect e-satisfaction, which in turn affect the decision making of the people.

Based on the study of Valdez (2019) on the trends and issues of the hotel industry is that human resource issues have a substantial impact on the number of visitors that visit the place. This would include trends and issues on logistics, operations, consumer affairs, safety, and security, therefore suggesting that hotels can render good service to customers by establishing standard rules and regulations, as well as guiding employee behaviours. Then, accordingly, a hotel must continually function at its highest level of fluid efficiency in order to survive. Ineffective performance denotes waste in the use of hotel inputs, which is damaging to the industry's ability to maintain low operating costs in order to survive. The presence of multiple factors that encourage people to visit and be able to use the products and services provided by businesses in the area indeed have a significant influence on the sustainability of the hospitality industry (Gador, 2019).

Amador and Estember (2021) discovered that performance indicators create the highest satisfaction and discontent. Through text mining analysis, location and employee interaction were important customer satisfaction indicators. Staff, room quality, amenities, facilities, comfort, and service are key hotel performance factors. This study evaluated positive and negative reviews to identify emotion; a negative result means negative emotion and a positive result means positive emotion. In their study, the nationalities of online users from the Philippines, USA, Canada, and the UK were considered.

According to Mananghaya and Albacea (2019), businesses and organizations can assess the general mood and contentment of clients by utilizing sentiment classification techniques on Twitter data, allowing the collection of important feedback and the faster implementation of solutions. Sentiment analysis, sometimes called opinion mining, examines a text's content and structure to determine its positive, negative, or neutral polarity. This analysis measures customer happiness with firm

items, movie reviews, and political news viewpoints. This analysis can also be utilized to research a product or service by consumers. In light of publications that utilized online reviews.

The study by Buena and Ong (2019) mentioned that the emerging trend of using online reviews as a foundation before purchasing a product or service is now significant in the decision-making process. Their study made use of online reviews in order to determine consumer trust in 5 selected resorts in Region 4, Philippines. According to this, consumers desire not just the core products or services, but also other offers that they usually validate through reviews made by other users.

According to Lily Grace and Guhao (2020) and Parasuraman et al. (1988), there is a relationship between service quality and e-booking, as well as a connection between customer loyalty and e-booking. This indicates the significant impact of service quality that customers can synthesize through the reviews left on booking sites.

A study about the selected restaurants in Laguna, Philippines by Baluyot and MSHRM (2021) proved the importance of personal attention and emotional Gadatet al.: Customer satisfaction and sentiment reviews on selected booking sites of Manila Manor Hotel 2019-2021.-59 -QUANTUM JOURNAL OF SOCIAL SCIENCES AND HUMANITIES 4(4): 55-74.eISSN: 2716-6481<https://doi.org/10.55197/qjssh.v4i4.249>connection when interacting with customers and providing consistent services. By utilizing the SERVQUAL model and the Customer Delight Model, it was revealed that customers would seek value and experience rather than just the food quality. In conclusion, alternative customer satisfaction delivery strategies must be evaluated in order to cope with the increasing customer expectations and demands. This is what the hotel establishments should also be able to provide.

A study by Prentice (2019) mentions the importance of service quality on the company's profitability because of its distinctive qualities such as intangibility,

inseparability, perishability, and heterogeneity (Parasuraman, et al., 1988). The study used a qualitative approach to evaluate casino guests' service quality perceptions, as well as the influence of SERVQUAL dimensions on their loyalty and future patronage. The evaluation results on service quality vary depending on the customer segments. Some expressed concern over the responsiveness of the employees, while others indicated empathy as having the greatest influence on future patronage.

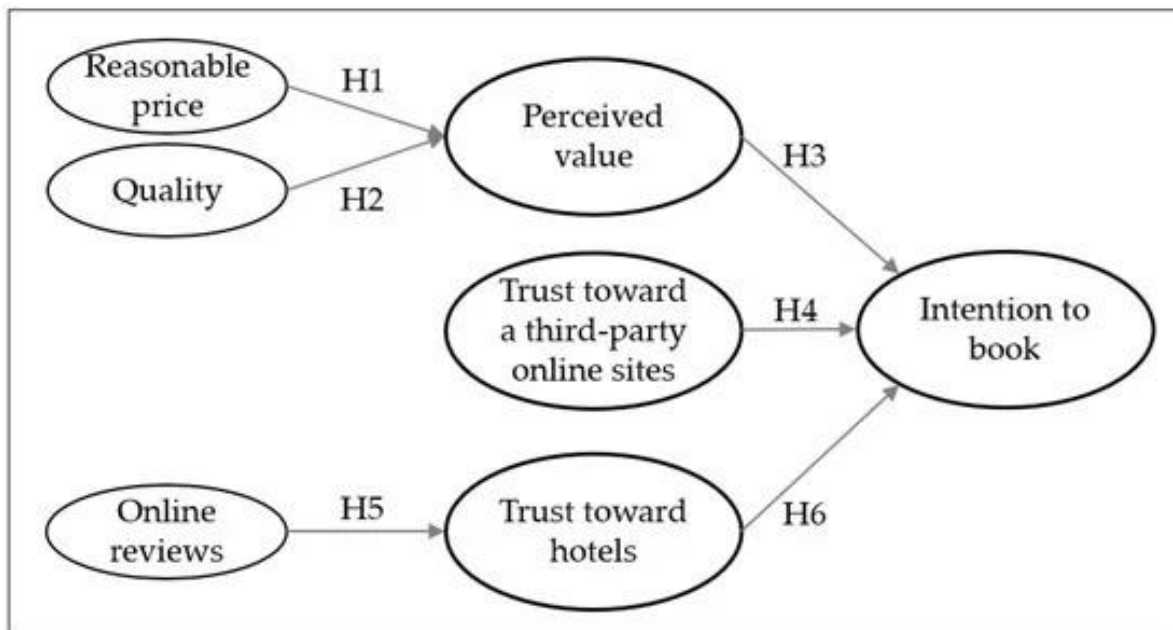

Another study by Balinado et al. (2021), claiming to have been the first to explore SERVQUAL on automotive after-sales service in the Philippines, found that 2 out of 5 dimensions (empathy and reliability) have a significant effect on customer satisfaction. Based on the findings, customers appreciate the feeling of being valued, and they become more satisfied upon receiving prompt responses and attention. Also, in cases of unforeseen events, customers appreciate it when service employees apologize.

A study related to Philippine banks by Talavera (2020) recognizes 16 important bank attributes for Filipinos which can then be classified into 4 SERVQUAL dimensions: reliability, empathy, tangibles, and responsiveness. According to this, it is important that customers get dependable, error-free, timely, and accurate services, as well as the effective handling of complaints and difficulties. Overall, the analysis of customer perceptions, preferences, or satisfaction serves a great purpose for a lot of research and studies related to service quality. Through this, the industries are knowledgeable on how to operate accordingly. However, because of the dynamic characteristics of the service industry, it is important that the management is consistent with their purpose. Nowadays, online reviews serve as a source of information for service providers regarding the current demands and issues related to their products and services. Upon investigation, the research found relevant information related to online reviews, hotel service attributes, and sentiments. However, the researchers realized the lack of studies pertaining to the use of the SERVQUAL model specifically on hotels in the Philippines, thus, serving as motivation for this study.

According to a study by Sha and Jan (2018), SERVQUAL qualities have a considerable impact on customer satisfaction in Pakistan. There is also a strong correlation between customer happiness and the quality of service provided (tangibles like reliability, responsiveness, assurance, and empathy) that shows that the experience of guests at hotels is critical to the hotel business, as previously reported. Good hotel experiences reduce customer complaints and enhance the likelihood of a return visit and a positive recommendation. Customers, on the other hand, will not have a great experience in a hotel unless they believe that the service is worth far more than the money they paid.

in a study on Ho Chi Minh, Vietnam hotels by Ba et al. (2019), sentiment analysis was performed on Tripadvisor reviews, uncovering hidden insights for hotel services. This study adds to the current practice of hotel managers monitoring the aspects of their business, as well as keeping track of client feedback on social media by studying the sentiment of customers provided in textual reviews. The sentiments conveyed by customers through text reviews are referred to as customer sentiment, which can be expressed as positive, negative, or neutral (Geetha et al., 2017). Human language has the ability to convey emotions that quantitative ratings cannot. Such emotions are joy, sadness, anger, fear, surprise, and disgust, and for the study, unknown emotions were also included

Conceptual **Framework**

3.1 Price

Price was viewed by consumers as the sum of money they had to forgo in order to purchase a good or service. Price is viewed as either a financial sacrifice for obtaining a goods or a quality indicator of a product, according to a number of prior research. Price has long been discovered to have a detrimental impact on a product's value for money as a financial sacrifice. One of the main factors in choosing what to buy and determining value is the price. Customers search for the cheapest alternative by comparing prices on internet websites with reference pricing. Prior studies have shown that consumers' perceptions of value are significantly impacted by a lower price for a given quality (i.e., a price that is viewed as sensible). If a cost is taken into account Price has been suggested as a useful strategy to improve consumers' value and to favourably affect the perceived value of services, as well as hotel reservations, in previous studies. Although consumers believe that the rates of the hotels, they have chosen offer the best value for their money, they do not actually expect the hotels to match the cost of a subpar product. A given more reasonable price therefore results in a higher perceived value within the acceptable price range. Consequently, we can state the following:

Hypothesis 1. A fair pricing has a beneficial impact on perceived value.

3.2. Quality

Perceived quality has typically been employed as a gauge of how closely hotel services adhere to guests' expectations. Perceived quality has been previously defined as the consumer's assessment of the overall excellence of a good or service. The basic service offerings of hotels and the growth of a meaningful relationship between guests and hotels were both correlated with quality in hotels. Since people typically look for value by balancing a fair price with good quality, quality may be one of the main factors in determining perceived value. Quality may be one of the functional sub-factors that affect perceived value, according to Sweeney and Soutar. Additionally, a number of earlier research looked at how people's intentions to book a hotel are influenced by quality. In particular, the quality of hotels includes assessments of the cleanliness of the rooms, the practicality of the location, the value for the money, and the friendliness of the staff. Consumers could judge the worth of hotels based on their quality by determining the quality. As a result, this study suggests the following:

Hypothesis 2: Perceived value is positively influenced by quality.

3.3. Perceived Value

The concept of value-for-money has been used to define the perceived value as the compromise between price and quality. It has been recognised as a salient factor that significantly affects customers' decision-making processes and plays a crucial part in influencing their satisfaction, choices, and purchasing patterns. For instance, Zeithaml has suggested that value acts as a bridge between quality and purchase when making a purchasing decision. The majority of studies on perceived value have discovered a connection between value and online purchase intent. We also anticipate that there will be a favourable correlation between people's perceptions of value and their intent to book when it comes to online hotel reservations. As a result, we might declare the following about the research:

Hypothesis 3. Perceived value influences intent in a good way of booking a hotel.

3.4. Trust toward a Third-Party Online Booking Sites

According to the definition of trust given by the dictionary, it is "the willingness of a party to be vulnerable to the actions of another party based on the expectation that the other will perform a particular action important to trustor, irrespective of the ability to monitor or control that other party." It is one of the fundamental aspects of buyer-seller relationships and has long played a significant role in the choice of whether or not to purchase a specific item from a specific retailer. When it comes to marketing, trust is viewed as a psychological condition that

includes the willingness to accept vulnerability in the context of a positive consumer expectation. According to Bijlsma-Frankema and Woolthuis, customers do certainly spend more money with a salesman they can trust than one they can't.

Previous studies covered the difficulties that consumers had when using traditional hotel reservation methods including travel agencies, broadcast media, printed advertisements, etc. As the internet has grown, a number of online platforms have emerged that help online customers make better informed decisions by providing them with specific information about hotels, including user comments and experiences as well as online reviews from previous customers on hotel booking websites. Building trust with websites is a vital factor in influencing their booking intentions, even when consumers can easily get information about the hotels there.

Consumers tend to put up less effort when conducting transactions with an internet website they trust and when looking up information about the website or provider. Although a lack of trust may cause consumers to steer clear of online purchases, many consumers who plan to travel prioritise trust. Customers are more likely to make purchases from an online store they trust. Previous research on online shopping has suggested that consumers' intentions to shop at an online store are positively influenced by their trust in the retailer. Customers must trust the website while also relying on the information it offers in order to make hotel reservations. Websites for booking hotels online. Chen and Dibb go on to emphasise the significance of websites that affect consumers' online intentions since they give them information to use when making an online hotel booking decision. Consequently, the following theory is created.

Hypothesis 4: The intention to book is positively influenced by trust toward a third-party online booking service.

2.5. Online Reviews

Most people generally read online reviews before making a reservation. While previous consumers share their hotel experiences in online reviews, a potential consumer receives more detailed information about a target hotel, which gradually increases expectation before making a decision. Online reviews provide easily accessible up-to-date information on hotels, which is more reliable than content posted by service providers themselves. A positive review especially induces a positive change of attitude toward the hotel. Ye et al. have presented that positive online reviews can significantly increase the number of bookings in a hotel. While

prior studies found that online reviews provide useful references for potential consumers before purchase, consumers increasingly depend on online customer reviews. For example, Elwalda et al. examines that online reviews significantly affect customer intention and trust in e-vendors, particularly for customers who frequently use online reviews before making a purchase. Based upon the above, we can posit the following hypothesis:

Hypothesis 5. Online reviews positively influence trust toward hotels.

2.6. Trust toward Hotels

While lack of trust toward a hotel might be a major obstacle to book a room, consumers normally have a more cautious behaviour to book a hotel. Before making a reservation, consumers tried to collect all information for reducing uncertainty regarding inexperienced product or service. To avoid from this uncertainty, hotels need to present a trustworthy image on booking websites by providing detailed information, which should be consistent with the website's promises. Previous studies on trust toward hotel domains have suggested that consumers believe there is less risk associated with online purchase when they have greater trust toward hotels, and have eventually more positive towards intention to book. While Jarvenpaa et al. found that trust is still a critical challenge even when purchasing from a known online vendor, such as a hotel booking website in hotel contexts, the level of trust toward hotels affects online hotel booking intentions. Therefore, we propose the following hypothesis:

Hypothesis 6. Trust toward hotels positively influences intention to book.

RESEARCH **METHODOLOGY**

3.1 Research Design

- The research design refers to the overall strategy that you choose to integrate the different components of the study in a coherent and logical way, thereby, ensuring you will effectively address the research problem; it constitutes the blueprint for the collection, measurement, and analysis of data. The function of a research design is to ensure that the evidence obtained enables you to effectively address the research problem logically and as unambiguously as possible.

3.2 Descriptive Research Design

- Descriptive research design is a type of research design that aims to obtain information to systematically describe a phenomenon, situation, or population. More specifically, it helps answer the what, when, where, and how questions regarding the research problem, rather than the why.

- The descriptive method of research can involve the use of many different kinds of research methods to investigate the variables in question. It predominantly employs quantitative data, although qualitative data is also used sometimes for descriptive purposes. It is important to note that in the descriptive method of research, unlike in experimental research, the researcher does not control or manipulate any variables. Instead, the variables are only identified, observed, and measured.

3.3 Data Collection Methods

Data can be classified into two types, namely primary data and secondary data. The primary importance of data collection in any research or business process is that it helps to determine many important things about the company, particularly the performance.

So, the data collection process plays an important role in all the streams. Depending on the type of data, the data collection method is divided into two categories namely,

- Primary Data Collection methods
- Secondary Data Collection methods

Primary Data Collection Methods-

Primary data or raw data is a type of information that is obtained directly from the first-hand source through experiments, surveys or observations. The primary data collection method is further classified into two types. They are as follows-

- Quantitative Data Collection Methods - It is based on mathematical calculations using various formats like close-ended questions, correlation, mean, median or mode measures
- Qualitative Data Collection Methods - It does not involve any mathematical calculations. This method is closely associated with elements that are not quantifiable. This qualitative data collection method includes interviews, questionnaires, observations, case studies, etc.

Secondary Data Collection Methods

- Secondary data is data collected by someone other than the actual user. It means that the information is already available, and someone analyses it. The secondary data includes magazines, newspapers, books, journals, etc. It may be either published data or unpublished data.

3.4 Sources of Data

- Primary Data – Primary Research was conducted using data gathered through the development of a questionnaire. A proper inductive and fundamental questionnaire was developed for collecting the data. The data was further presented in the form of bar graphs, line graphs, pie charts etc.

Sampling

- Sampling is a process used in statistical analysis in which a predetermined number of observations are taken from a larger population. The methodology used to sample from a larger population depends on the type of analysis being performed, but it may include simple random sampling or systematic sampling.
- Sampling Method – Random Sampling
- Sampling Instrument – Questionnaire
- Sample Size – 65
- Number of Questions - 10

Tool used for data analysis

Google forms for analysing the data as it provides the way to extract data from any format and helps us to represent the data in user friendly manner.

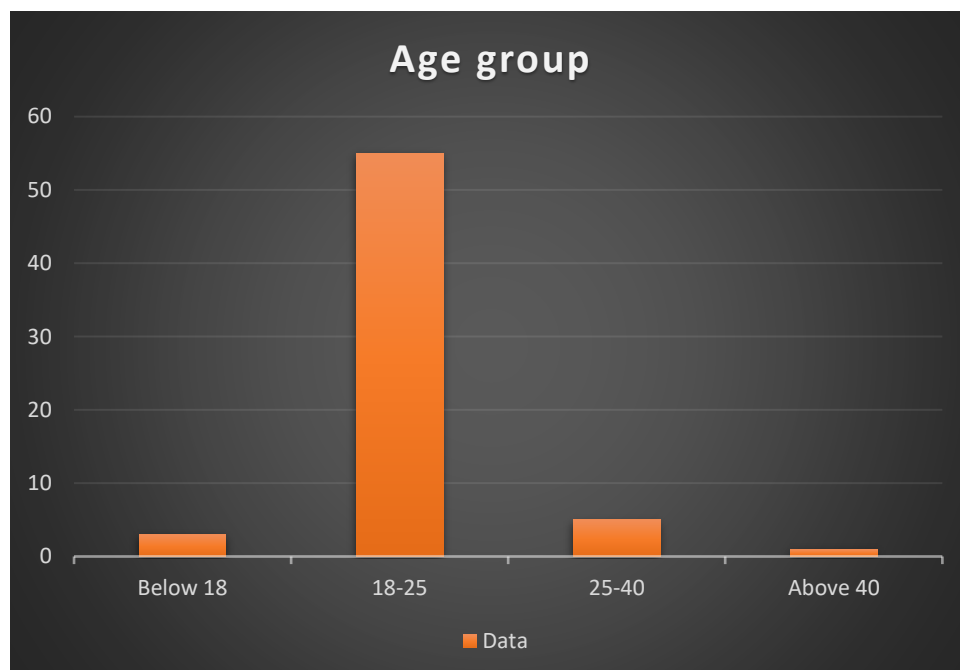

DATA ANALYSIS AND **INTERPRETATION**

Q1. Under which category do you fall?

Data-

Age category	Data
Below 18	3
18-25	55
25-40	5
Above 40	2

Interpretation-

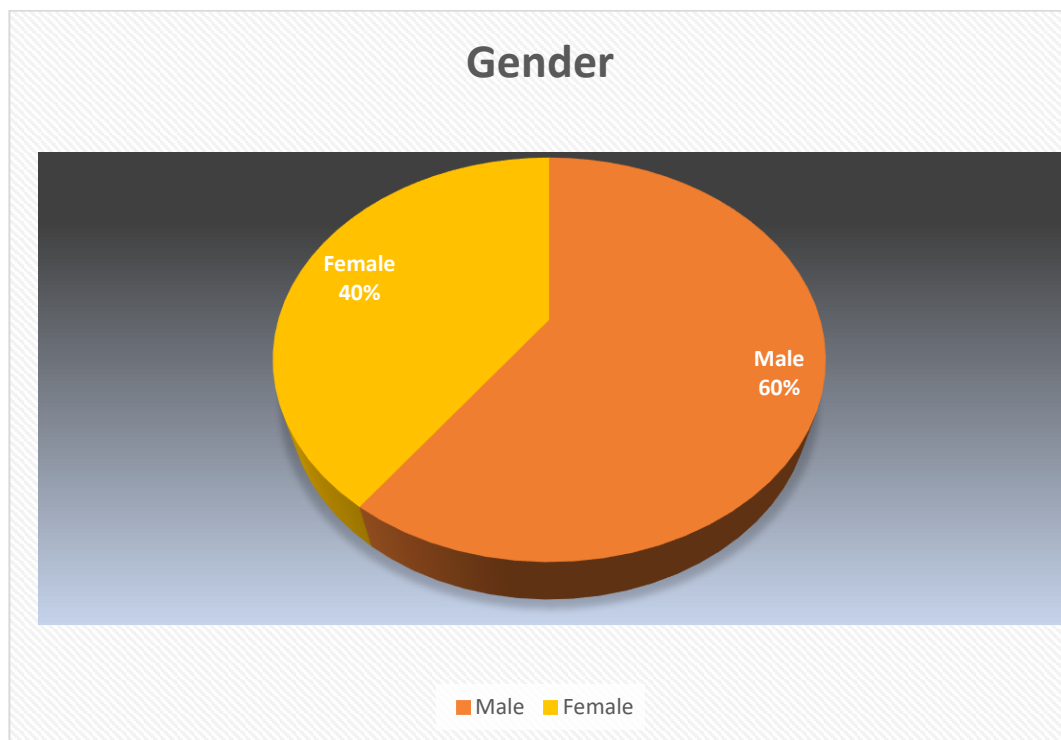

AGE GROUPS - The respondents were from all age groups with the majority ageing up to 18-25 that was 84.6 %. Whereas 4.6% of the data was of below 18 age groups. And 7.7% and 3.1% were 25-40 and above 40 age groups. This shows that Hotel booking sites are mostly used by 18 to 25 age group of people

Q2. What is your gender?

Data-

Gender	Data
Male	39
Female	26

Interpretation -

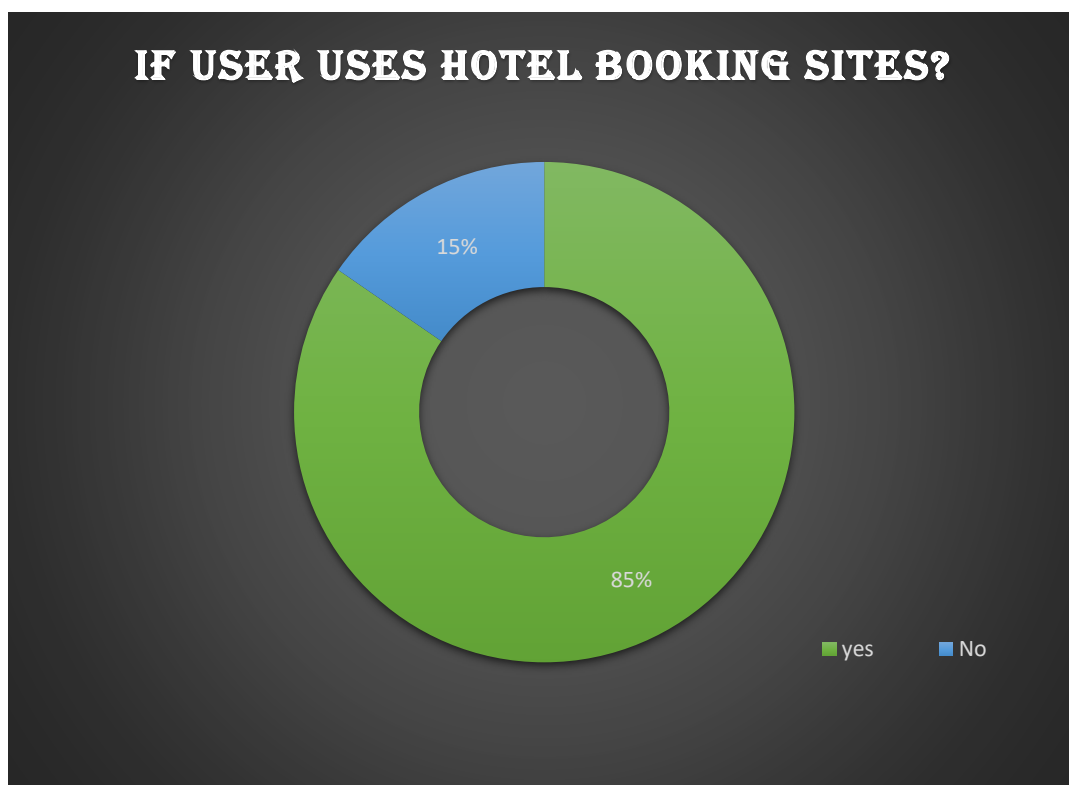

More than 66% of the population of respondents were Male, i.e. 43, whereas only 34% respondents were Females

Q3. Do you use online booking sites or apps for hotel bookings?

Data-

Particular	Data
Yes	55
No	10

Interpretation of Data

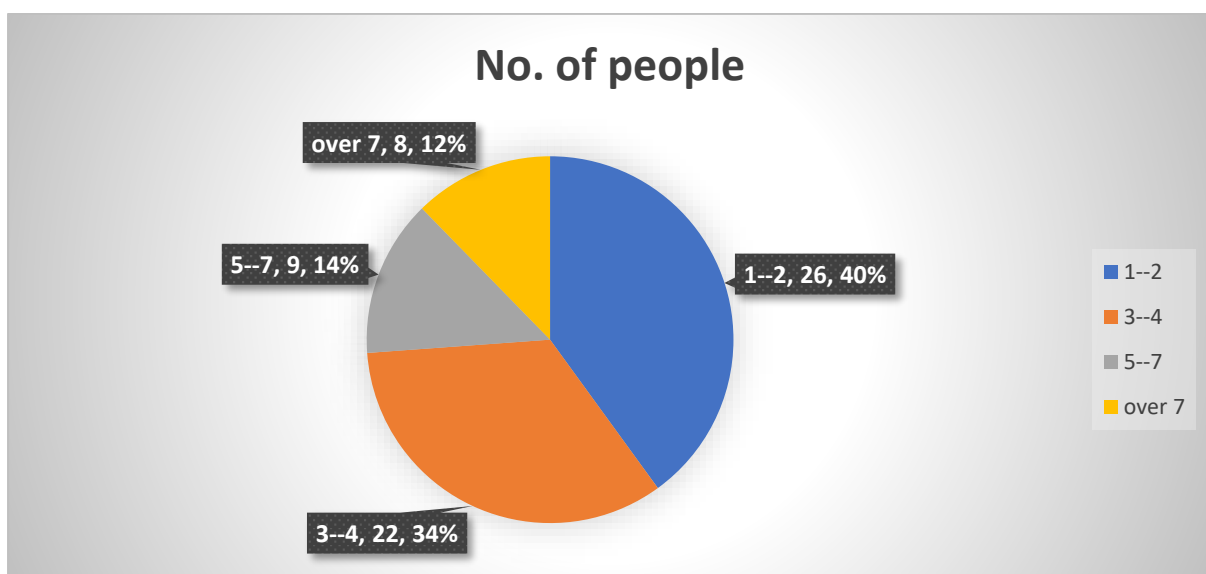

This shows that maximum number of the peoples are using online Hotel booking sites i.e 85 % and only 15% of people prefer to book the Hotels offline.

Q4. Number of online Hotel booking experience in a year?

Data-

No of times	No of people
1-2	26
3-4	22
5-7	9
Over 7	8

Intrepratation of Data-

Majority of people visit 1-2 times in a year i.e 40 % of the total 2nd most big percentage goes with 3 -4 time booking in a year which constitutes of 33.8% whereas 13.8 % and 12.30% goes with 5-7 and over 7 respectively.

Q5. Number of users Hotels you visit in a year?

Frequency	Data
1-2	17
3-4	20
4-5	13
Over 5	15

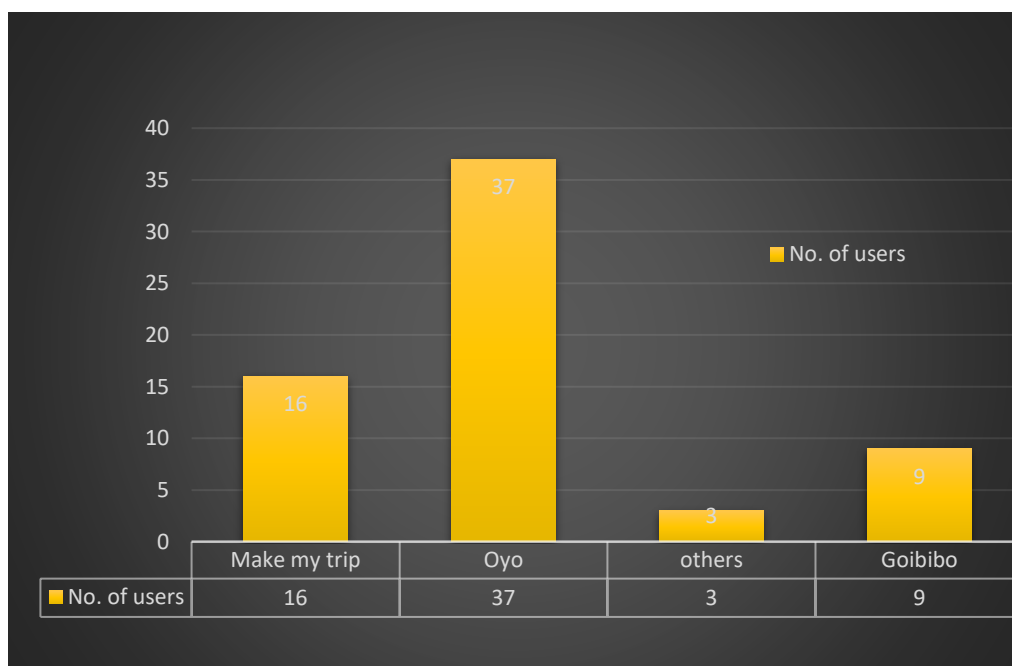

Q6. Which website or app will be mostly preferred by user for booking a hotel?

Data-

Name of website	Data
Make my trip	16
Oyo	37
others	3
Booking.com	9

Intrepratation of Data-

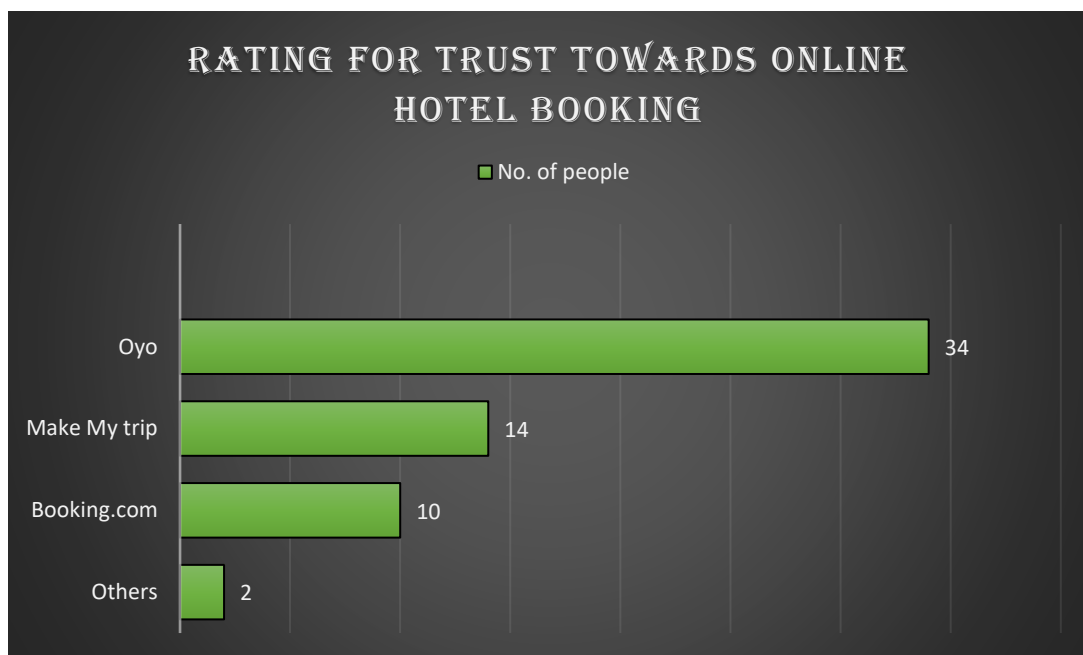

After collecting data from the respondents, it was found that majority use OYO for booking a hotel online ie.37 .2nd most website that was used by user was Make my trip with 16 users means the second-best website is Booking .com and then comes Booking.com with 9 users and then others with 3 users.

Q7. Which Hotel booking sites or app you trust the most? (1 having no trust and 5 being highly trusted)

Data-

Ratings	Data
Others	2
Booking.com	10
Make my trip	14
Oyo	34

Interpretation of Data-

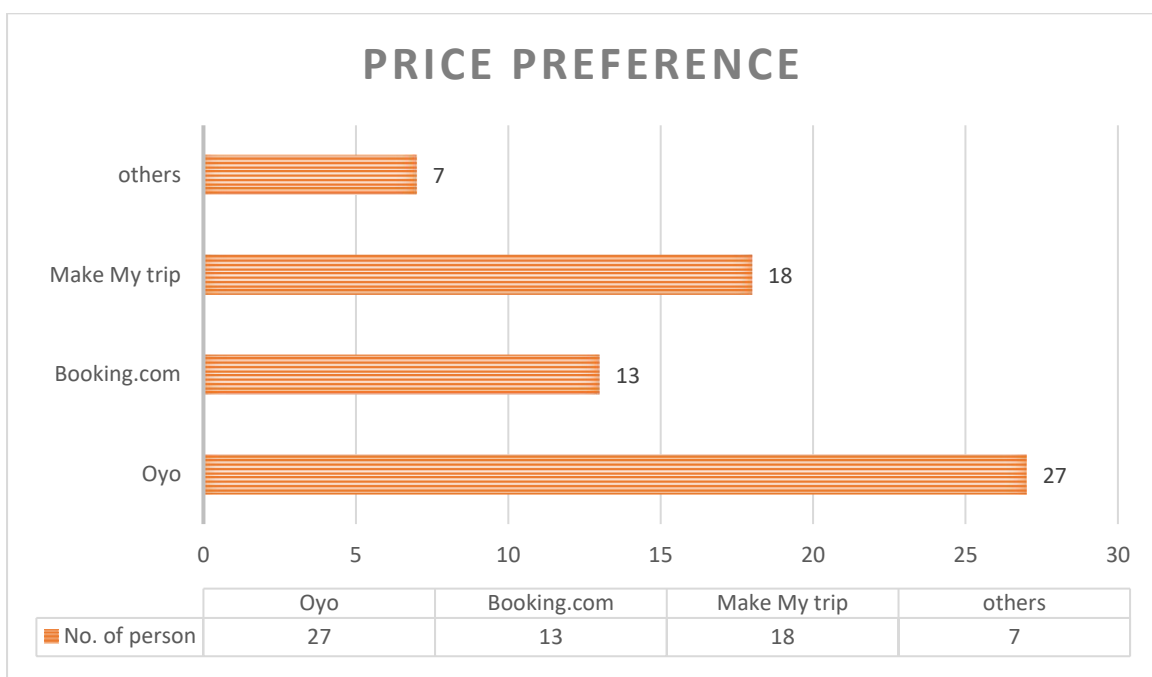

This state that the trust of people towards online hotel booking has increased as the highest number of people have voted for Oyo with 34 people, 2nd highest rating is for Make my trip with 14 people followed by Booking.com by 10 people.

Q8. Which company according to you gives you best pricing for hotel booking?

Data-

Particular	No. of people
Oyo	27
Booking.com	13
Make My trip	18
others	7

Interpretation of Data-

According to this data 42% of people prefer Oyo for pricing i.e. 27 peoples followed by Make my trip with 28% with 18 peoples whereas 21% of peoples choose Booking.com i.e. 13 peoples and at last 9% people choose other websites for booking hotel with best pricing.

Q9. Which of the company provide best services according to you?

Data-

<i>particulars</i>	No. of people
Oyo	28
Booking.com	9
Make my trip	24
others	4

Interpretation of data-

This data shows that the customer service is best with Oyo with 48% . 2nd best customer service is done by Make my trip with 32% people are happy with the services provide by followed by Booking.com 14% and 6% of Oyo and others respectively.

Q10. Do you think online Hotel booking experience is better than the traditional offline booking system?

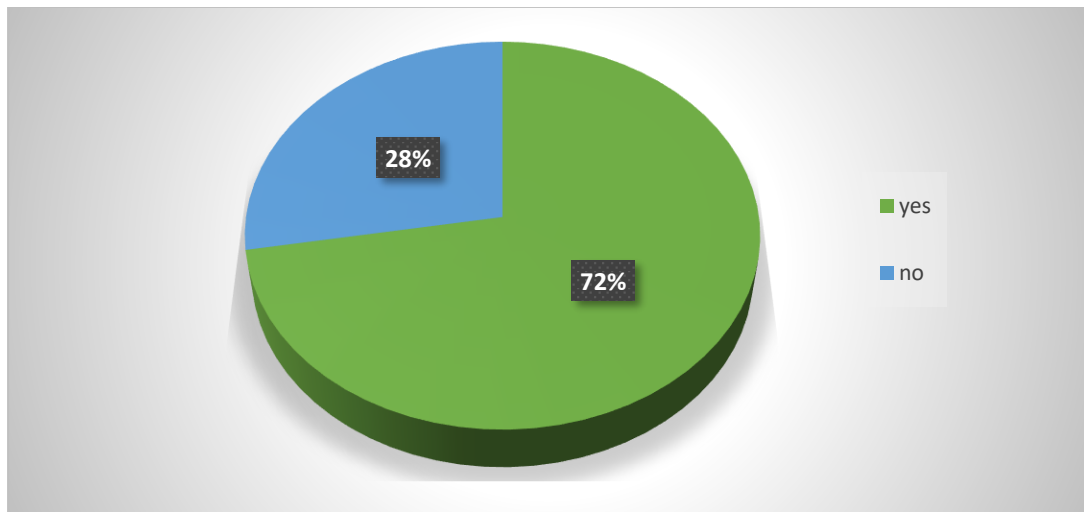

Data-

Particular	Data
Yes	47
No	18

If yes, then why?

	pricing	conveniency	Good services	Trustworthy
Data	14	9	17	7

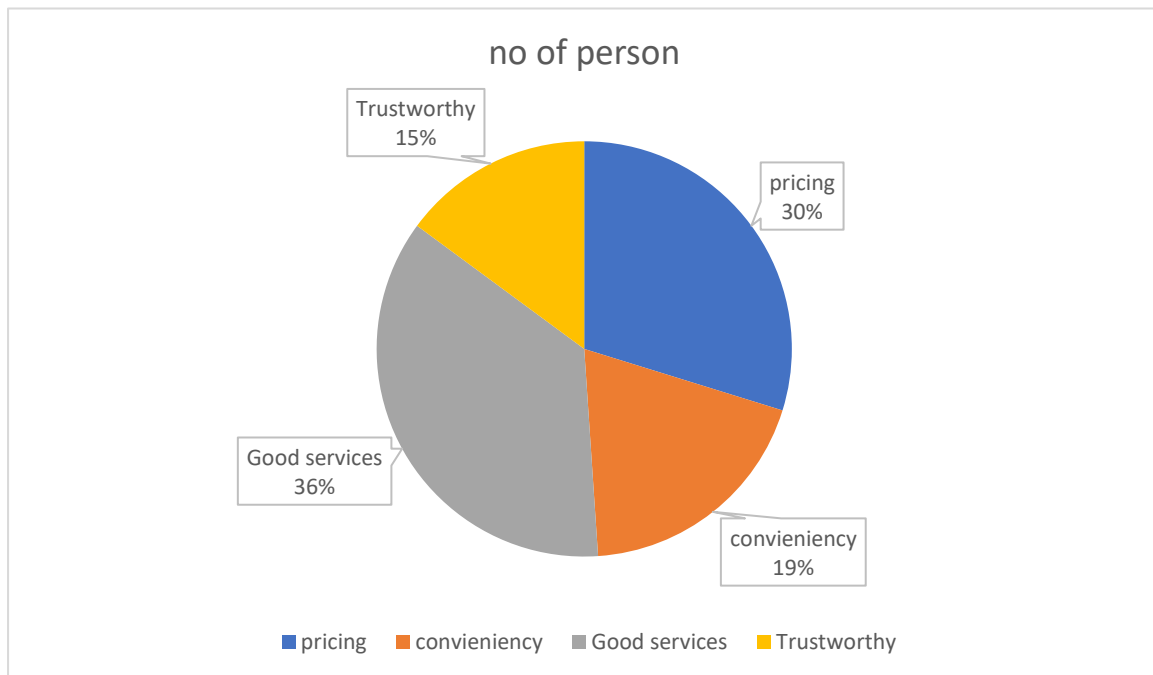

Interpretation of data-

1.

72% of people feel that the online booking sites are better than the traditional online booking system. Whereas 28% feels that the traditional is better.

2.If yes then on what basis?

Out of 72% of people -36% (i.e., 17) prefer good services

-30% (i.e., 14) prefer pricing

-19% (i.e., 9) prefer convinienency

And -15% (i.e., 7) prefer Trustworthiness for booking a hotel online.

Result and Findings

The study found that OYO is best out of the three website for Hotel booking as it provide best pricing and quality (in terms of location and services that is provided by them).People prefer to use make my trip the most in comparison to the other two as this company has gathered trust among the consumer and has provide best satisfaction to the users .Study also suggest the influential factors to intention for booking a hotel on the best three online booking sites i.e., Make my trip, Oyo and Booking.com . The study focuses of the content, usefulness and importance of online travel portal, i.e., Make my trip, Oyo and booking.com with specific reason for consumer satisfaction between these three giants which are available for the hotel booking. From this study one can understand that the use of online travel portals is increasing overtime, and soon it will have a platform of its own in the tourism sector. Traditional travel agencies are also providing services of online portals in order to increase their customer base. Oyo is one of the biggest portals in this category which we can recognise by the data which we have taken by the people as per the sampling procedure. we can see that the trust of user of online Hotel booking sites or apps have been increase a lot after the customer services have improved.

To test the proposed hypotheses, this study performed an online survey as a methodology and collected valid data from 65 respondents. 3 Hotels were taken for the analysis The results via analysis of research framework and six research hypotheses were proposed. The research model of this study addresses what are the intention of people before booking a hotel online and to understand which site or app give the best facility to consumer and maintain the trust toward third-party online booking intention to book a hotel. In addition to the direct relationships, while both price and quality influences directly the perceived value, online reviews have direct effects on trust toward hotels. Additionally, while the perceived value is significantly derived from reasonable price and quality, the price and quality are important antecedents of value in an online hotel booking context. At the same time, the online review is a relevant antecedent to have trust toward in online hotel booking.

Based on our findings, this study has the following research contributions. First, according to our results, we have found that the perceived value plays the most

significant role in online hotel booking in Oyo, Make my trip and Booking.com context since they may book a hotel online when they perceive benefits of more reasonable price and higher quality of hotel. Compared to results this study has also obtained consistent patterns of results in terms of examining the relationships among price, quality and perceived value. Second, we have also found that both trust toward third-party online booking sites and trust toward hotels have significant effects on individuals' intention to book. In this study, we considered two types of trust (i.e., trust related to the third-party websites and trust related to a hotel itself) as major determinants of affecting an individual's intention to book. In online booking a hotel context, two types of trust could play critical roles in predicting individuals' intention. Unless individuals overcome online uncertainty and transactional risk by increasing trust toward two objects (i.e., websites and hotels), they will be reluctant to make a reservation. Based on our findings, which related to online review on trust toward hotels, we further found that the effect of online review on trust toward hotels was significant. The results we obtained were consistent with those reported by Elwanda et al. in examining the consumer behaviour before booking a hotel online on Oyo, make my trip and Booking.com

This could aid Hotels in developing different marketing tactics for different segments of clients, as well as online reputation sites in improving their services by discriminating between different types of customers.

SUGGESTION

- Prices should be kept as per the quality services that the Hotel is going to provide as if the price will be higher then the perceived value of the user then the online booking sites will loose the trust on online booking.

- Hotel industry should give exiting discount offers to attract the user.

- Trust should be made among the user by giving them some refund if they are not satisfied with the services.

- we further found that the effect of online review on trust toward hotels was significant so, online review should be must as it helps the other user and also the hotels to improve their services.

- Users should compare the pricing from 2 – 3 website and should read the online reviews to get the best deal.
